

Andmekogu seisuga 31.12.2017

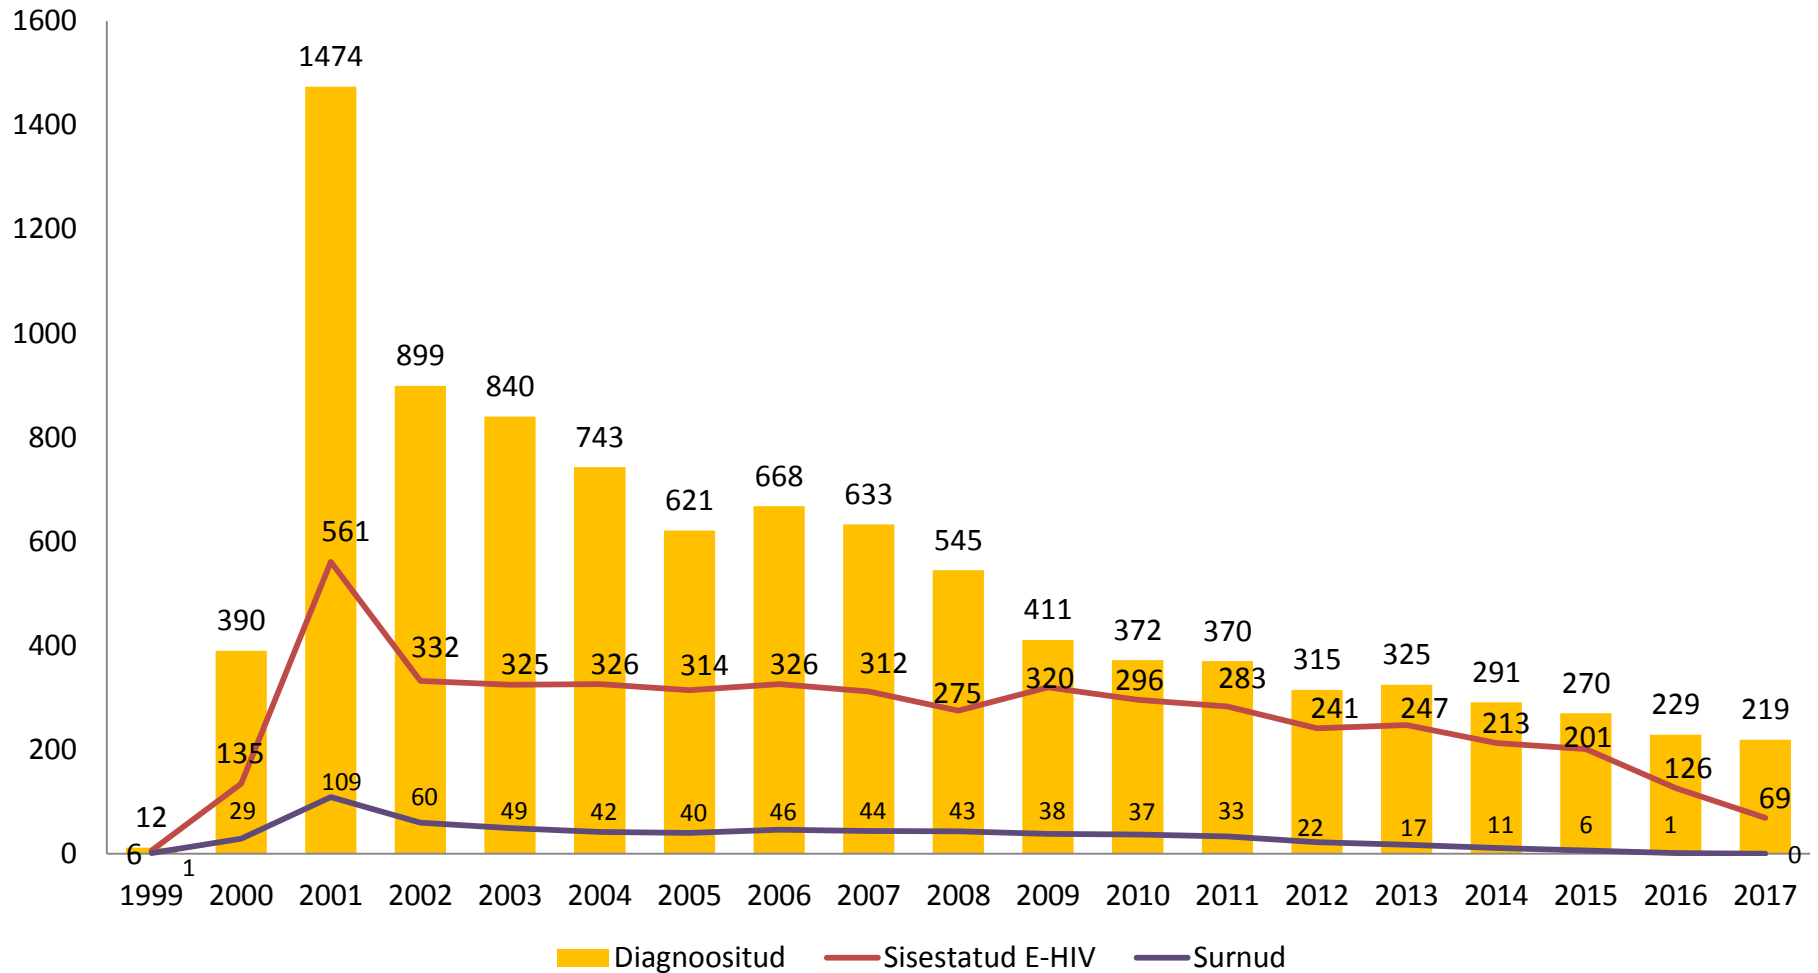

- Sisestatud 4923 patsienti , kumulatiivselt surnud 628 isikut
- Tbc diagnoositud 209-l E-HIV patsiendil
- AIDS diagnoositud E-HIV patsientidest 176 juhul
- Kvaliteedikontrolli on läbinud 12,6 % patsientide andmetest

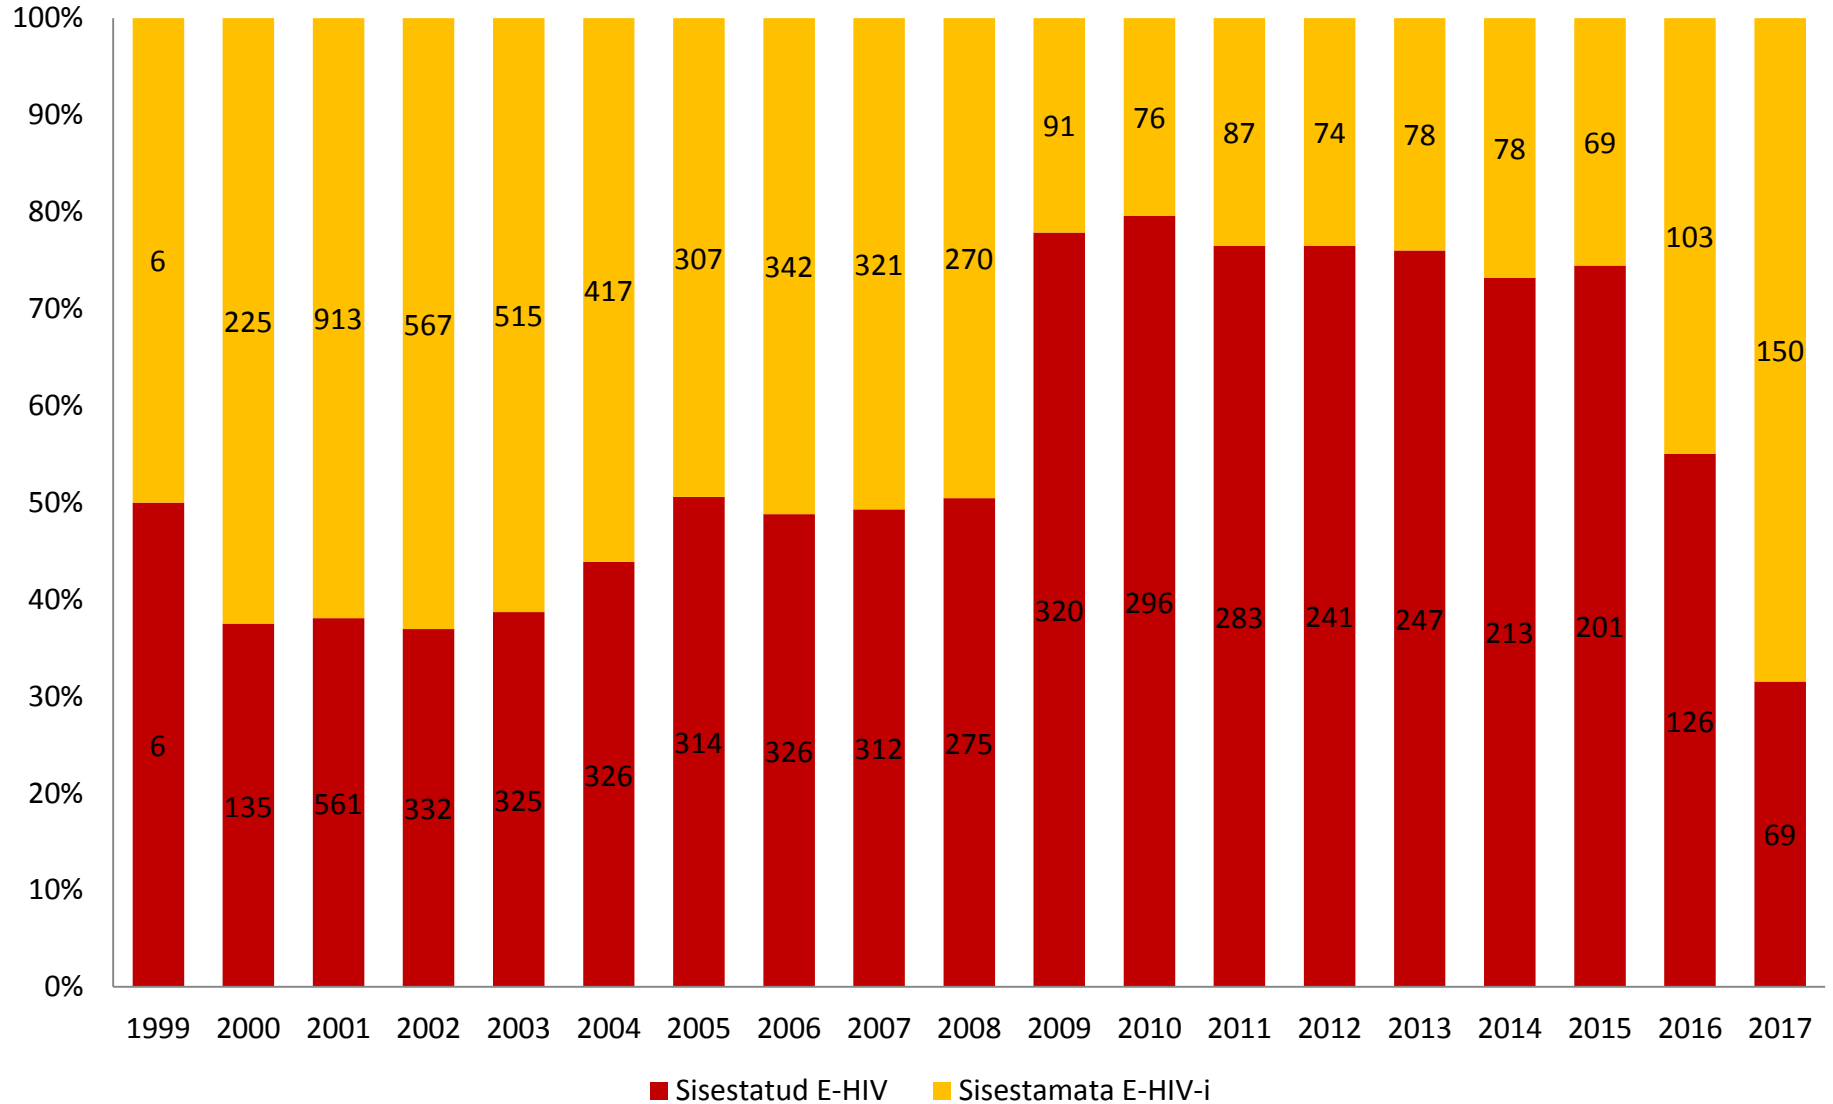

Andmeid sisestavad asutused (haiglad ja vanglad)

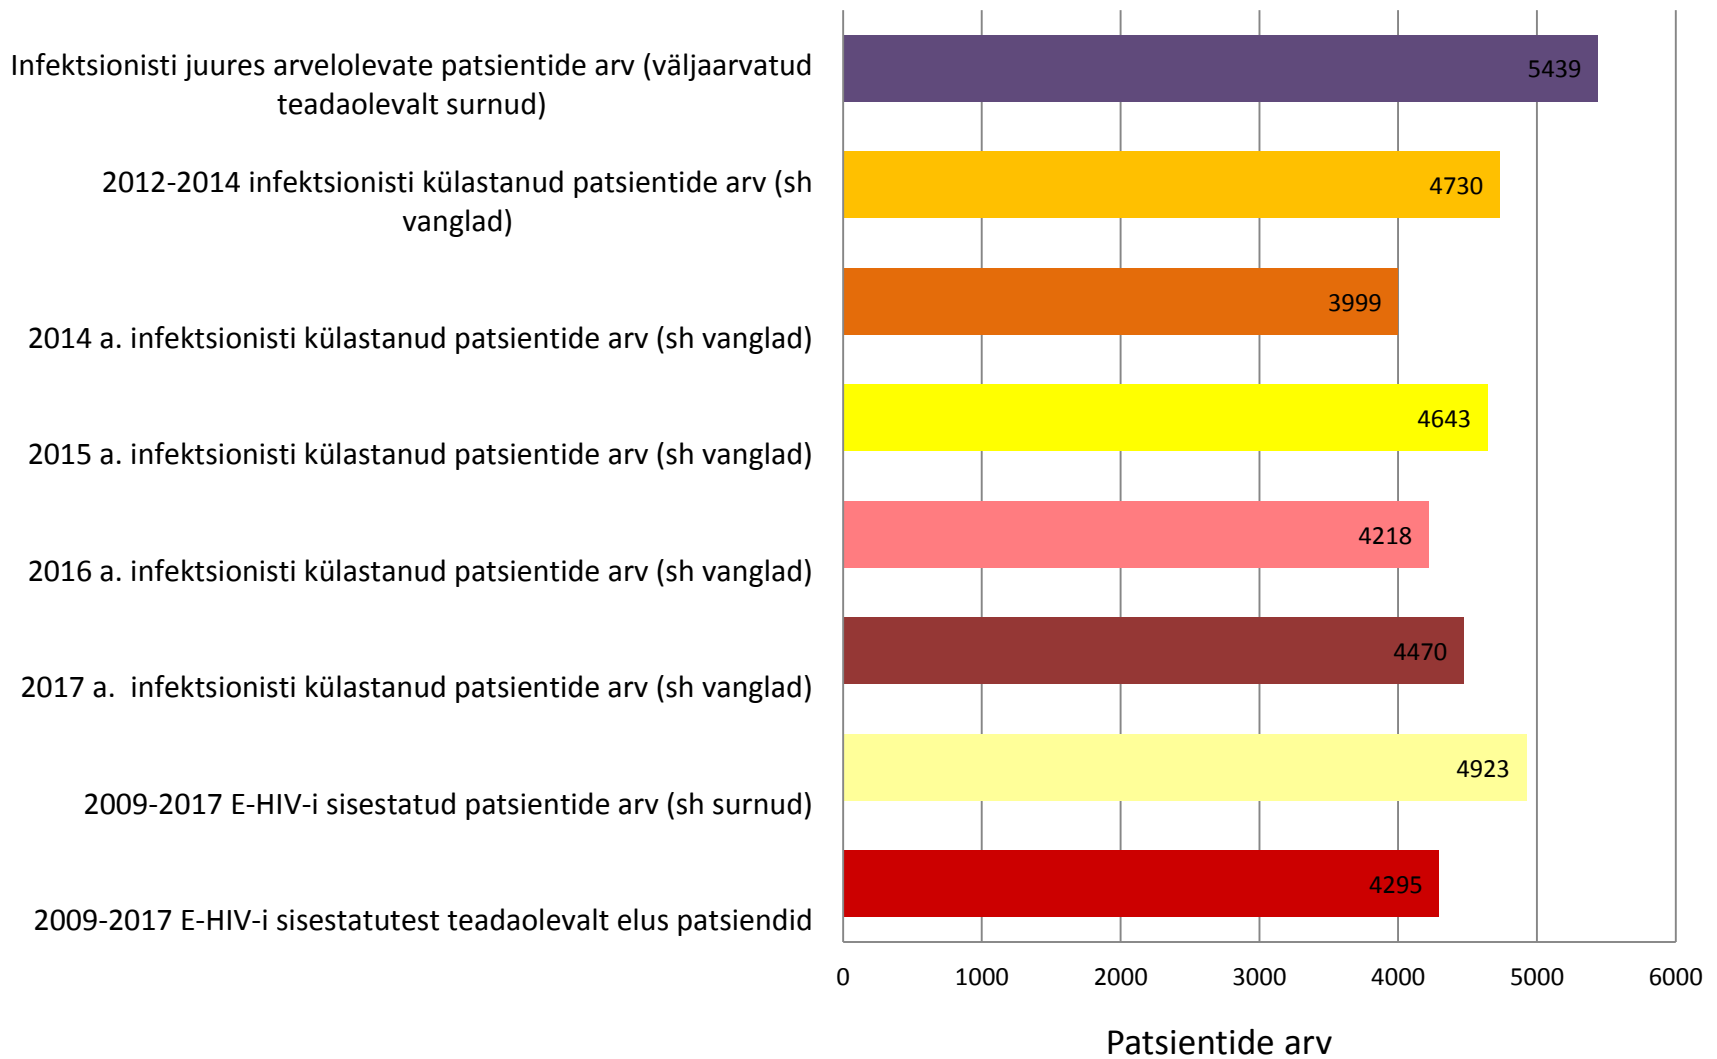

Uued HIV diagnoosid vs andmebaasi sisestatud

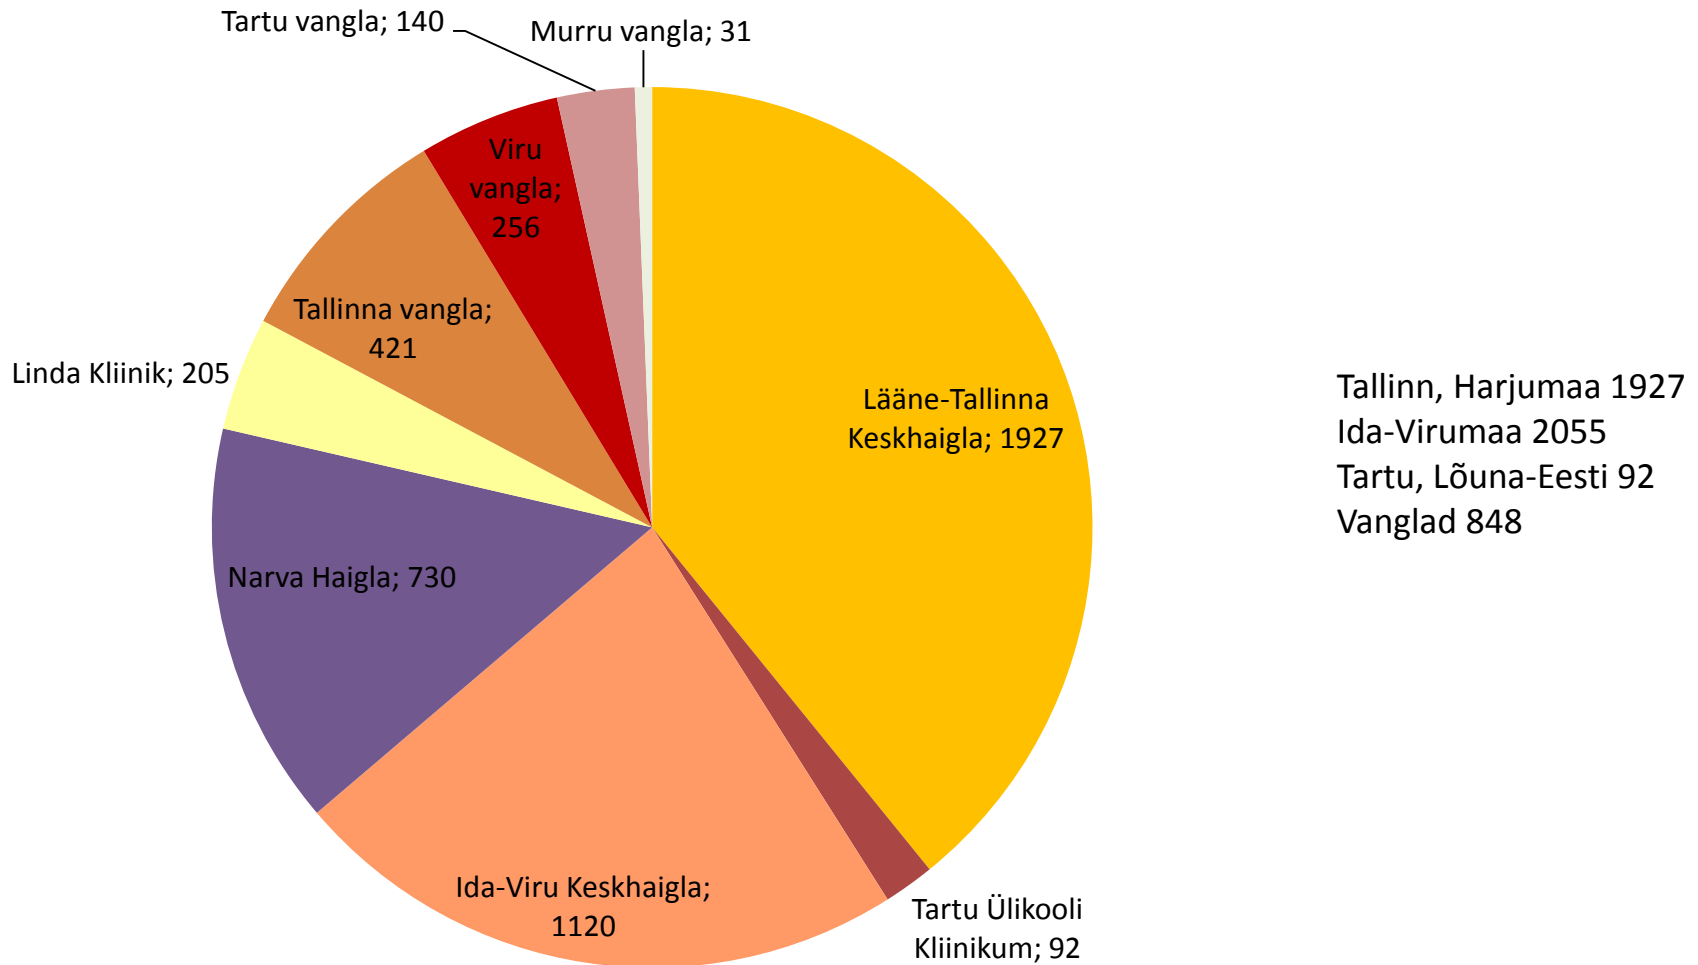

Sisestatud patsientide osakaal diagnoositest

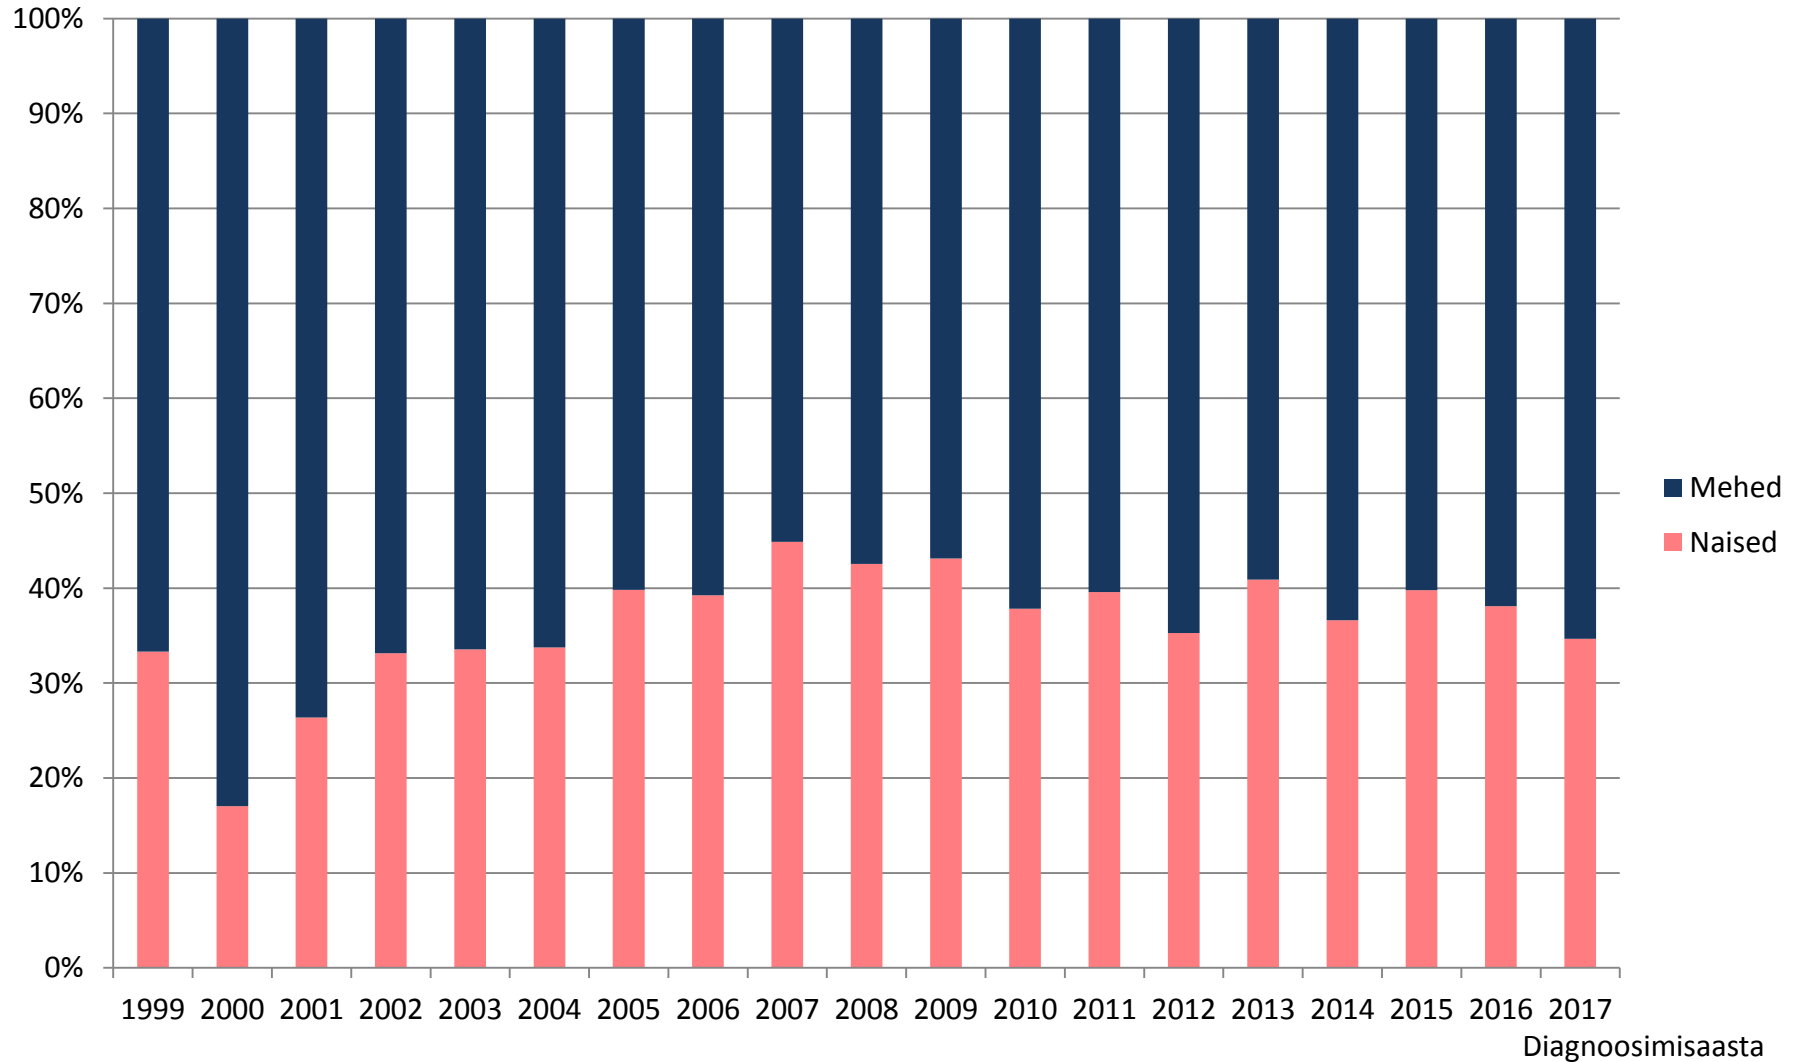

Allikas: Tervishoiuasutused, E-HIV

Sisestatud patsientide jaotus meditsiini-asutuste järgi

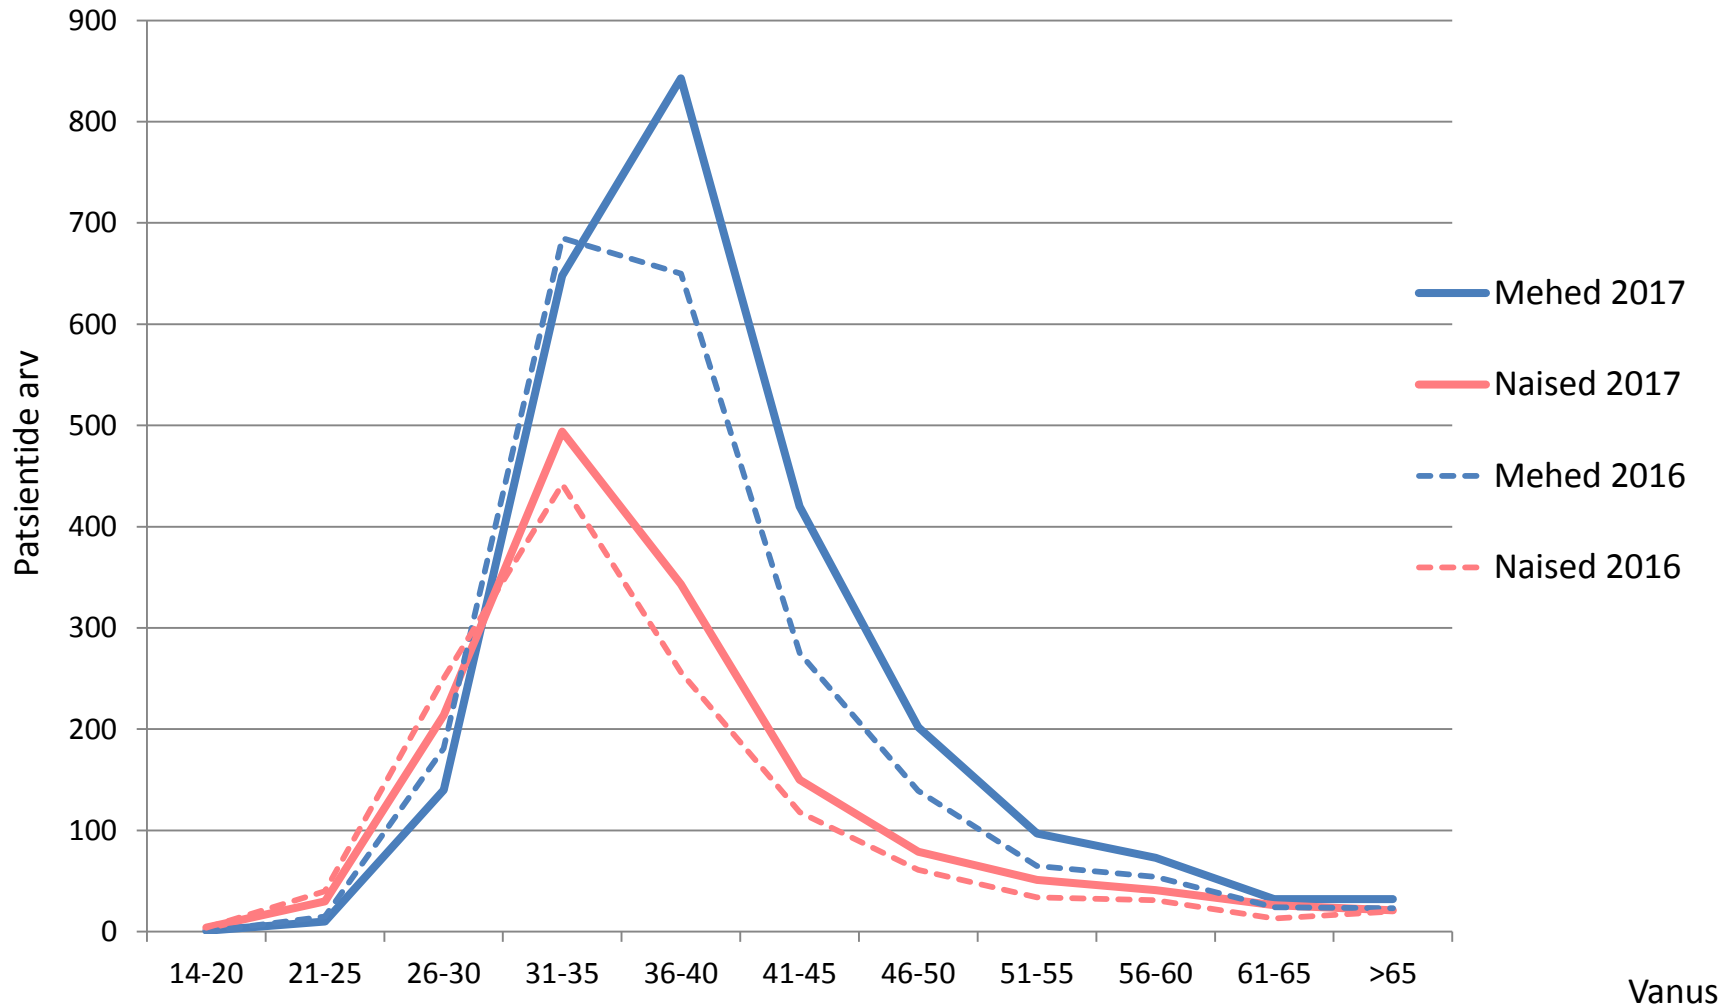

Sooline jaotuvus diagnoosimisel

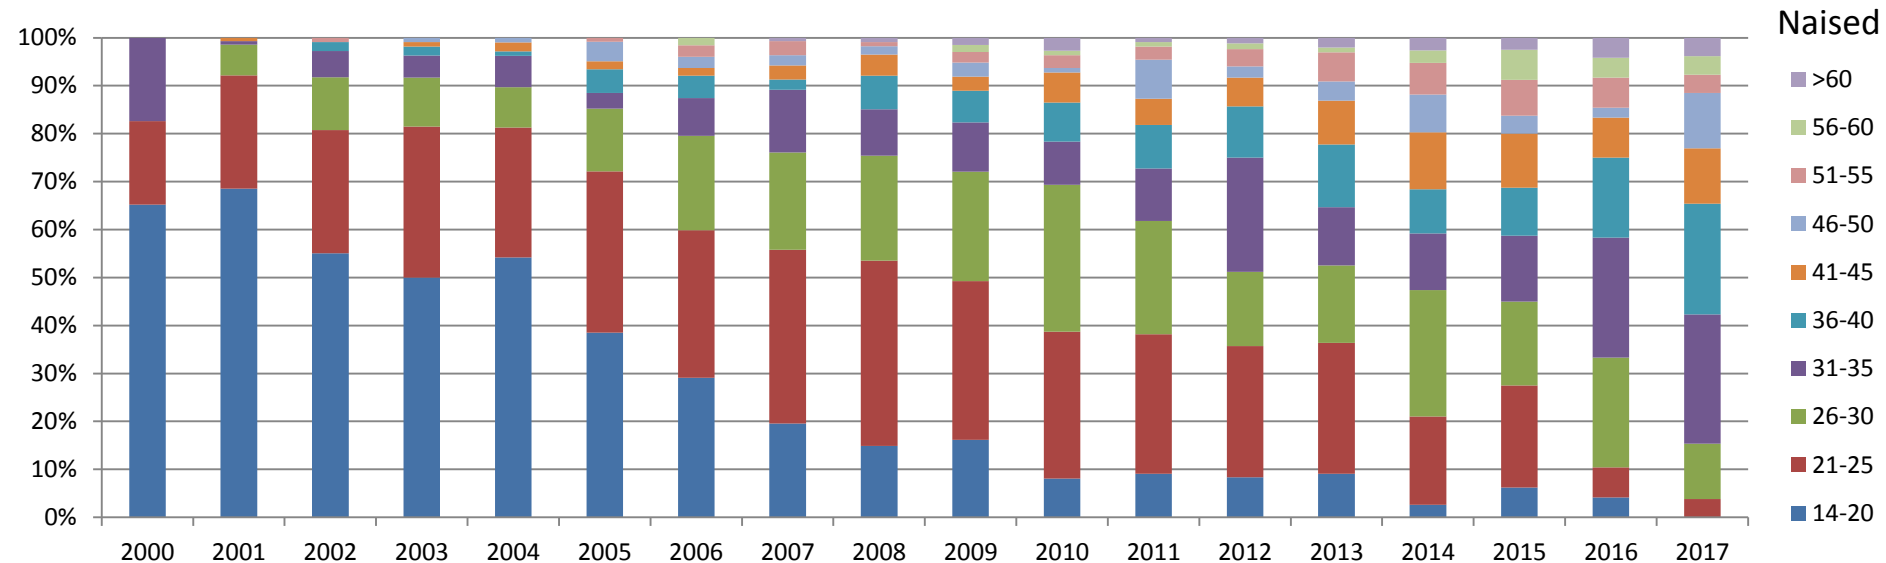

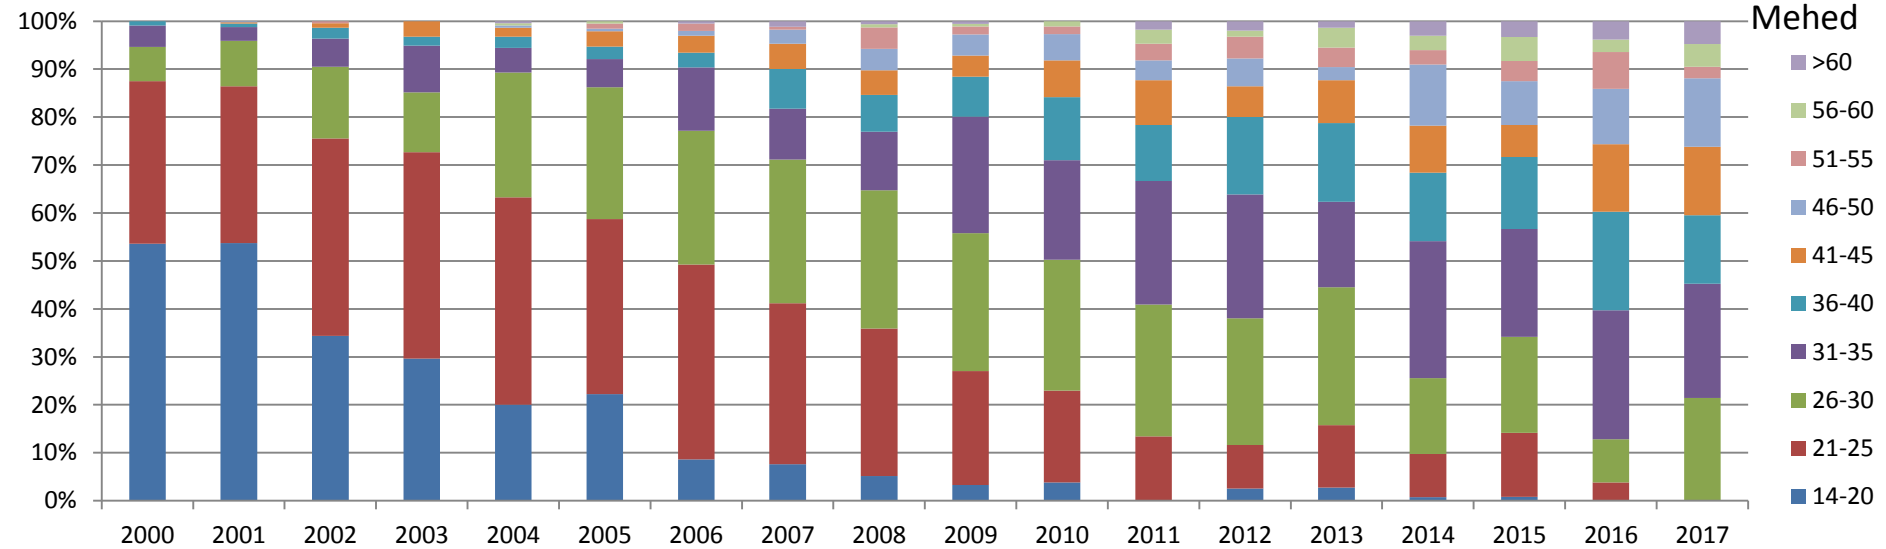

Vanusegrupid

andmekogus seisuga 31.12.2016 ja 31.12.2017

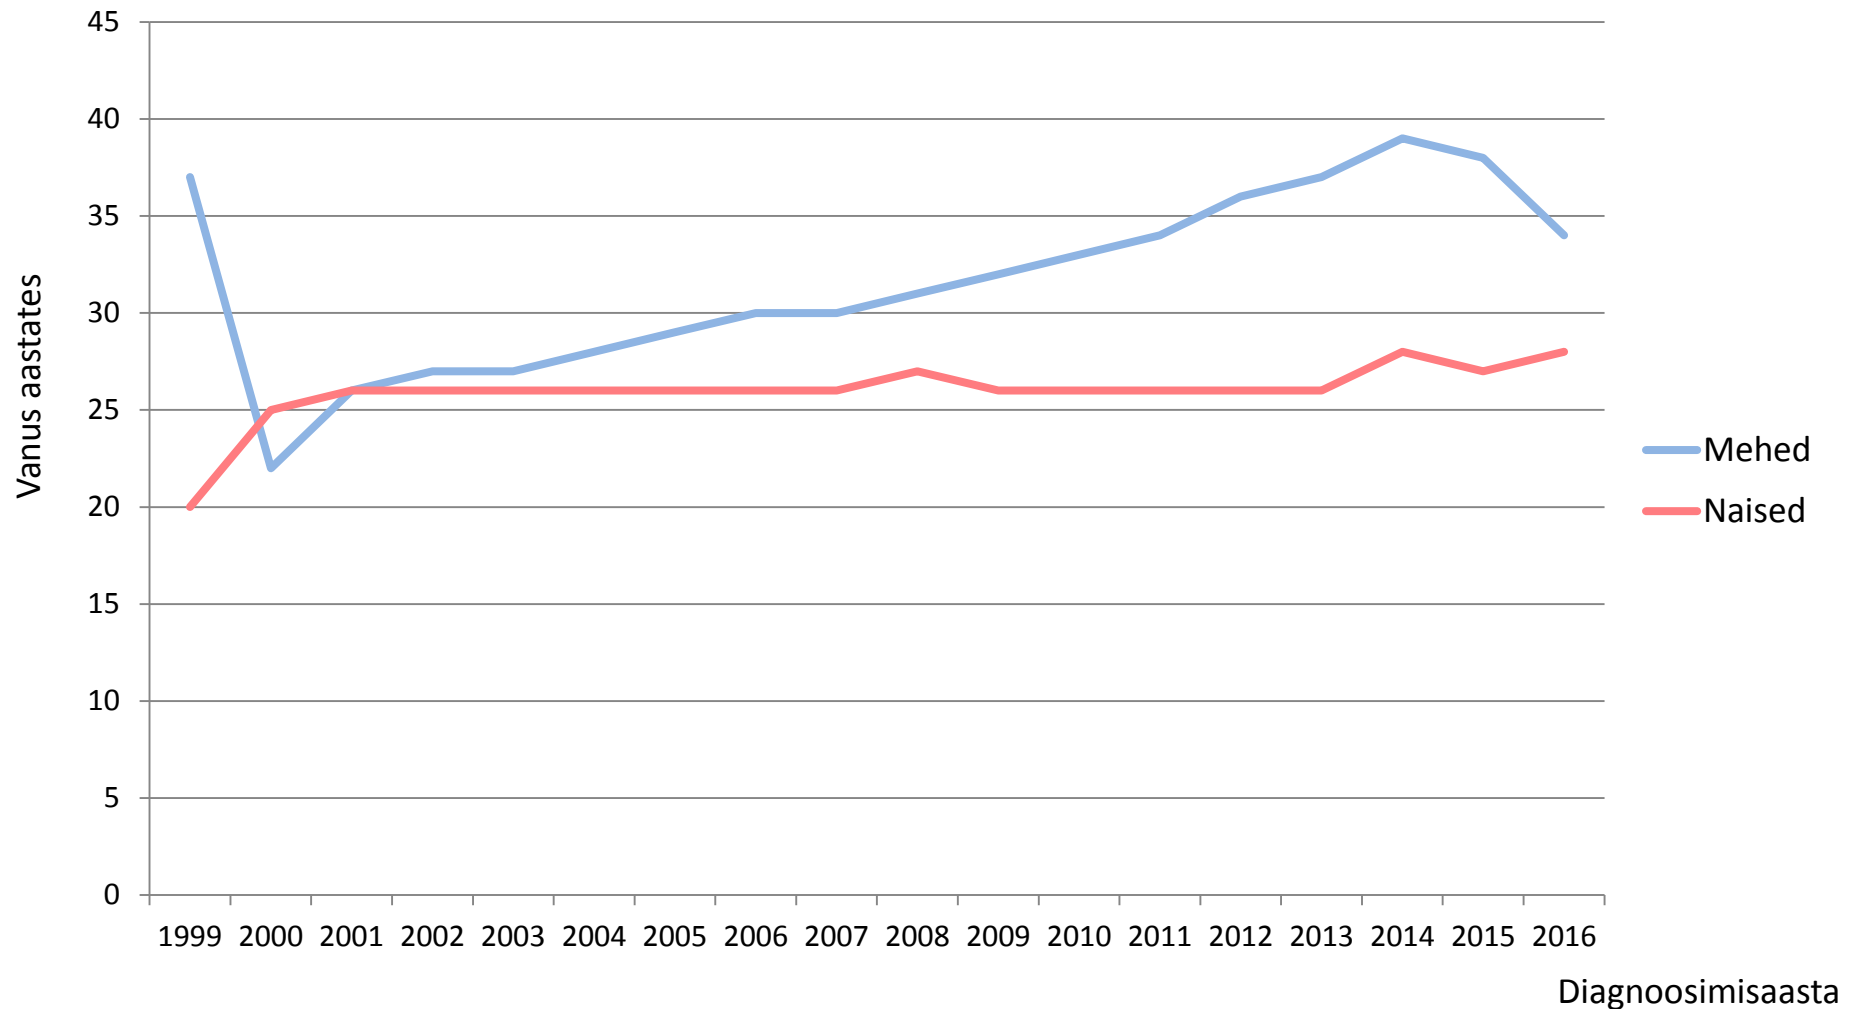

Vanused diagnoosimisel diagnoosimisaastate alusel

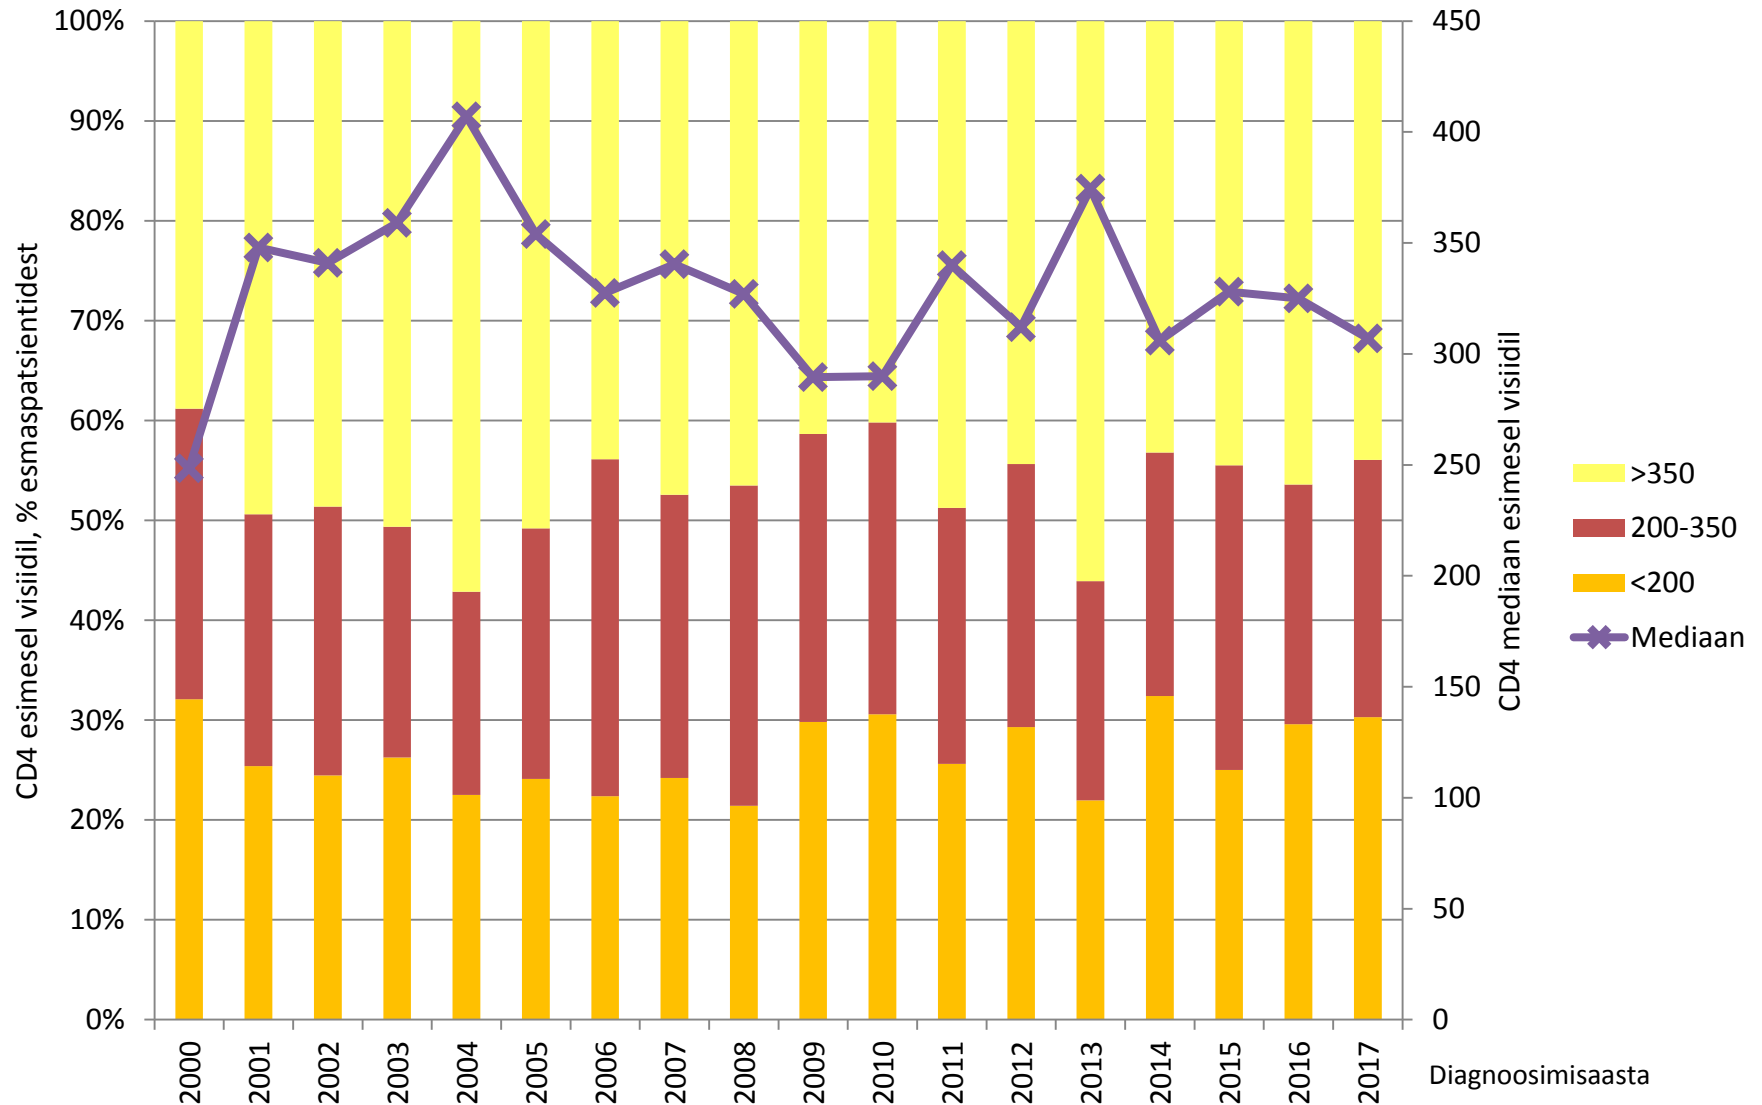

Mediaanvanused diagnoosimisel

CD4 väärtused esimesel visiidil

Nakatumisteed vastavalt soole

Mehed

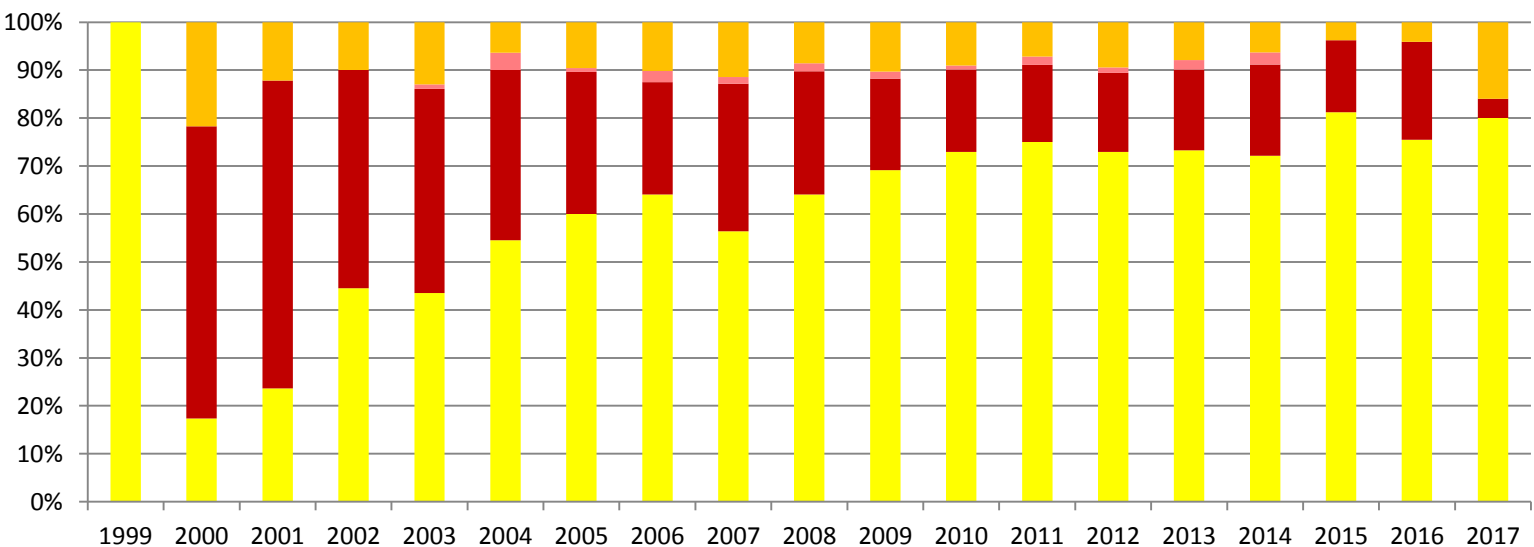

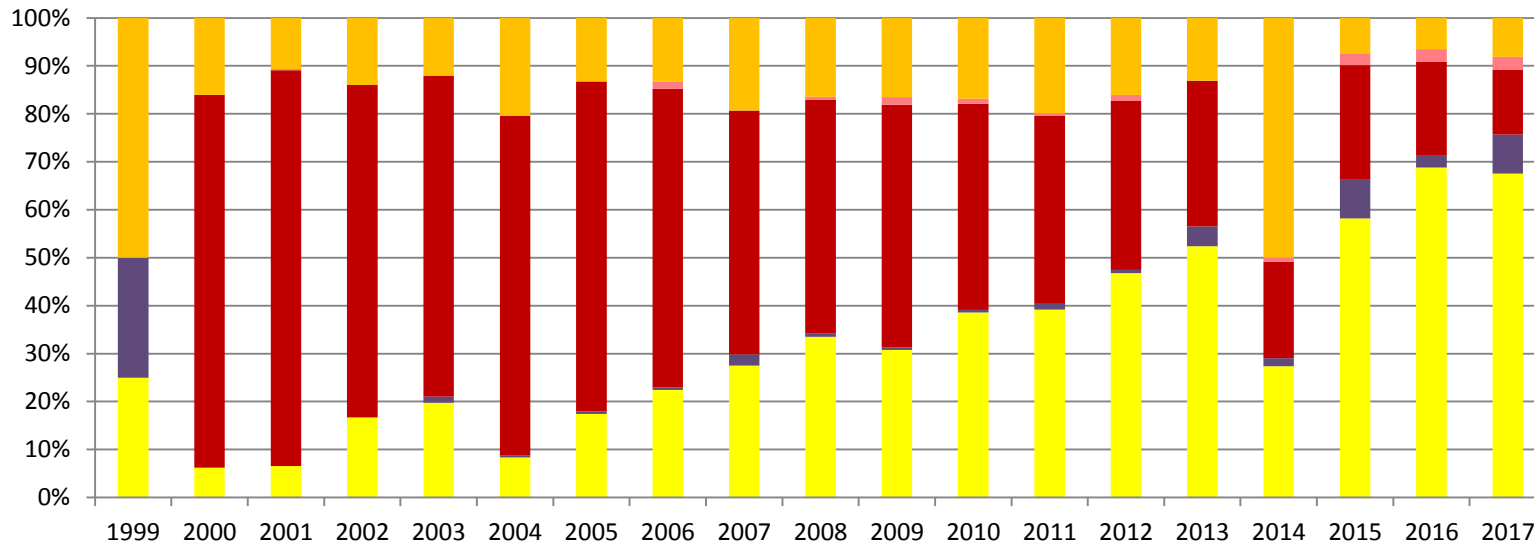

- Määramata
- Muu
- IDU
- Homoseksuaalne
- Heteroseksuaalne

Diagnoosimisaasta

Naised

- Määramata
- Muu
- IDU
- Heteroseksuaalne

Diagnoosimisaasta
